

Booster Buddy™

CARE & CLEANING

The first step to keeping your Booster Buddy™ healthy is *keeping it clean!*

Vinyl cushions must be able to breathe and ventilate moisture. If the vinyl's pores become clogged (from body oils, sunscreens, tanning lotions, etc) moisture becomes trapped in the foam of your seat which promotes mold and mildew.

After a day on the water, clean your seat with mild detergent and water (using a soft bristle brush for stubborn grime), then rinse and dry. Pay particular attention to the corded edges, where pore-clogging dirt collects - you may want to use a toothbrush to clean these areas.

Always use non-toxic cleaners for vinyl. Cleaning products containing chlorine, alcohol and/or ammonia will chemically dry your vinyl and promote premature cracking and peeling, while greasy cleaners, dressings, "preservers" and gloss-promoting products will clog the pores and seal-in existing dirt."

The Australian sun and salt can be terribly hard on vinyl , but *with a bit of care it should last for years.*
